Genetics is a branch of biology concerned with the study of genes, genetic variation, and heredity in organisms.. Gregor Mendel, a scientist and Augustinian friar, discovered genetics in the late 19th-century. Mendel studied "trait inheritance", patterns in the way traits are handed down from parents to offspring. He observed that organisms (pea plants) inherit traits by way of discrete "units ...

Human height or stature is the distance from the bottom of the feet to the top of the head in a human body, standing erect. It is measured using a stadiometer, usually in centimetres when using the metric system, or feet and inches when using the imperial system.. A particular genetic profile in men called Y haplotype I-M170 is correlated with height. . Ecological data shows that as the ...

Introduction. Uric acid is one of the most important nitrogen compounds in animal and plant bodies. It consists of 2,6,8 trihydroxypurine existing as a keto-enol tautomerism that under physiological conditions can easily be converted to the corresponding urate .It derived from purine, two of which, adenine and guanine, are present in DNA and RNA.

There are many types of cells. In biology class, you will usually work with plant-like cells and animal-like cells. We say "animal-like" because an animal type of cell could be anything from a tiny microorganism to a nerve cell in your brain. Biology classes often take out a microscope and look at single-celled microbes from pond water.
