Iterative vs direct methods. All sparse linear solvers belong to one of two families: iterative (also called matrix-free) or direct algorithms. Iterative solvers access system matrix  $A$  only by evaluating its products  $A \cdot x$  (or  $A^T \cdot x$  with trial vectors  $x$  provided by the solver. Direct solvers work with explicit representation of  $A$  and perform some sparse triangular factorization (Cholesky or LU ...
