SKELETAL MUSCLE ACTIVITY 6. Complete the following statements relating to the neuromuscular junction. Insert the correct answers in the numbered answer blanks. 1. A motor neuron and all of the skeletal muscle cells it stimulates is called a (1) . The axon of each motor neuron has numerous endings called (2) .

### **PowerPoint Presentation**

Your answer: Increasing stimulus frequency increases muscle tension generated by each successive force and it had limit, as predicted. Indicate what type of force was developed by the isolated skeletal muscle in this activity at the following stimulus frequencies: at 50 stimuli/sec, at 140 stimuli/sec, and above 146 stimuli/sec. Your answer:

What has happened to the muscle at this voltage? Max voltage is like the muscles limits, if there are no limits then there are injuries. It was at the contraction phase 5. An individual muscle fiber follows the all-or-none principle—it will either contract 100% or not at all. Does the muscle we are working with exhibit the all-or-none principle?
