Environmental chemistry is the scientific study of the chemical and biochemical phenomena that occur in natural places. It should not be confused with green chemistry, which seeks to reduce potential pollution at its source. It can be defined as the study of the sources, reactions, transport, effects, and fates of chemical species in the air, soil, and water environments; and the effect of ...

1. Introduction. Over the last few decades, ubiquitous contamination with various inorganic and organic substances has caused serious problems all over the world. One reason is the misuse or overuse of antibiotics e.g. for agricultural purposes, which enrich the population of multi-resistant pathogens. In many countries with a low human development index (HDI), particularly in Africa and ...

1. Introduction "Heavy metal" is a general collective term, which applies to the group of metals and metalloids with atomic density greater than 4000 kg m^{-3} , or 5 times more than water (Garbarino et al., 1995) and they are natural components of the earth's crust. Although some of them act as essential micro nutrients for living beings, at higher concentrations they can lead to severe ...

Ethylenediaminetetraacetic acid (EDTA), also known by several other names, is a chemical used for both industrial and medical purposes. It was synthesized for the first time in 1935 by Ferdinand Münz. It is an aminopolycarboxylic acid and a colorless, water-soluble solid. Its conjugate base is ethylenediaminetetraacetate. It is widely used to dissolve limescale.
