Purplemath. Solving proportions is simply a matter of stating the ratios as fractions, setting the two fractions equal to each other, cross-multiplying, and solving the resulting equation. The exercise set will probably start out by asking for the solutions to straightforward simple proportions, but they might use the "odds" notation, something like this:

This chapter discusses some of the design decisions that shaped LLVM 1, an umbrella project that hosts and develops a set of close-knit low-level toolchain components (e.g., assemblers, compilers, debuggers, etc.), which are designed to be compatible with existing tools typically used on Unix systems. The name "LLVM" was once an acronym, but is now just a brand for the umbrella project.
