As a reminder on concentration units, molarity is defined as the number of moles of solute in a liter of solution ($M = \text{mol/L}$). This is numerically equal to the number of millimoles of solute in a milliliter of solution ($M = \text{mmol/mL}$). It is often convenient to use this second definition of molarity in titrations and other work where small quantities are involved.

M_1 is the molar concentration of the solution with volume, V_1 , and M_2 is the molar concentration of the solution with volume, V_2 . Note that this equation can only be used in dilutions using pure solvent. A variation of this expression can be used when two solutions of different strength are involved.

Often, scientists and lab technicians express the concentration of a diluted solution in terms of a ratio to the original -- a 1:10 ratio, for example, meaning that the final solution has been diluted tenfold. Don't let this frighten you; it's just a different form of a simple equation.

This experiment is done over a two-week period. There are two separate lab reports, however, and you will receive two separate grades. The first lab report is on the Standardization of NaOH (Page 169 of the lab manual), whereas the second lab report is on the Equivalent Weight of an Unknown (Page 175 of the lab manual; see separate help file).

4 Notes on Units and Formulas A. Volume The units of volume commonly used in this manual are cm^3 and dm^3 . The conversion between cm^3 and dm^3 is $1 \text{ dm}^3 = 1000 \text{ cm}^3$. Note that a cm^3 are the same as millilitres (ml) and dm^3 are the same as litres (L).

by S. Choi, R. Gleason, and K. Jewett (with edits by R. Sandwick and M. J. Simpson) Introduction. Citric acid is a polyprotic acid (can release three H^+ s) that is a bit on the weak side (i.e., tends not to ionize completely). In solution in fruit juices, it lets a small portion of the H^+ go, however this small amount of acid is enough to create a $\text{pH} \approx 3$ solution and a sharp taste on the ...

Ionic compounds are usually dissociated in aqueous solution; thus if we combine solutions of silver nitrate AgNO_3 and sodium chloride NaCl we are really combining four different species: the cations (positive ions) Ag^+ and Na^+ and the anions (negative ions) NO_3^- and Cl^- . It happens that when the ions Ag^+ and Cl^- are brought together, they will combine to form an insoluble ...

Inverted sugar syrup (also called invert syrup) is an edible mixture of two simple sugars—glucose and fructose—that is made by heating sucrose (table sugar) with water. It is thought to be sweeter than table sugar, and foods that contain it retain moisture and crystallize less easily. Bakers, who call it invert syrup, may use it more than other sweeteners.

Solid-state chemistry, also sometimes referred as materials chemistry, is the study of the synthesis, structure, and properties of solid phase materials, particularly, but not necessarily exclusively of, non-molecular solids. It therefore has a strong overlap with solid-state physics, mineralogy, crystallography, ceramics, metallurgy, thermodynamics, materials science and electronics with a ...
