Number theory (or arithmetic or higher arithmetic in older usage) is a branch of pure mathematics devoted primarily to the study of the integers. German mathematician Carl Friedrich Gauss (1777–1855) said, "Mathematics is the queen of the sciences—and number theory is the queen of mathematics."

Flory–Huggins solution theory is a mathematical model of the thermodynamics of polymer solutions which takes account of the great dissimilarity in molecular sizes in adapting the usual expression for the entropy of mixing. The result is an equation for the Helmholtz free energy change for mixing a polymer with a solvent. Although it makes simplifying assumptions, it generates useful results ...

Charge It! Electrons are the negatively charged particles of atom. Together, all of the electrons of an atom create a negative charge that balances the positive charge of the protons in the atomic nucleus. Electrons are extremely small compared to all of the other parts of the atom. The mass of an electron is almost 1,000 times smaller than the mass of a proton.

(OEIS A079586) is known as the reciprocal Fibonacci constant.. Yuri Matiyasevich (1970) showed that there is a polynomial in  $x$ ,  $y$ , and a number of other variables  $z_1, z_2, \dots$  having the property that iff there exist integers  $x, y, z_1, z_2, \dots$  such that  $P(x, y, z_1, z_2, \dots) = 0$ . This led to the proof of the impossibility of the tenth of Hilbert's problems (does there exist a general method for solving Diophantine equations?) by ...
