The study of mind, brain, and behavior has grown in recent years with unprecedented speed. New avenues of approach, opened by developments in the biological and computer sciences, raise the hope that human beings, having achieved considerable mastery over the world around them, may also come closer to an understanding of themselves.

Other geological actions can set the stage for arch-forming weathering. In Arches National Park in southeastern Utah, for example, which contains the world's greatest collection of the landforms, faulting of overlying sandstone due to the instability of underlying salt beds produced rock jointing and exposures that made strata more vulnerable to weathering.

In probability theory and related fields, a stochastic or random process is a mathematical object usually defined as a family of random variables. Historically, the random variables were associated with or indexed by a set of numbers, usually viewed as points in time, giving the interpretation of a stochastic process representing numerical values of some system randomly changing over time, such ...

The infinite monkey theorem states that a monkey hitting keys at random on a typewriter keyboard for an infinite amount of time will almost surely type any given text, such as the complete works of William Shakespeare. In fact, the monkey would almost surely type every possible finite text an infinite number of times. However, the probability that monkeys filling the observable universe would ...

Cancer growth is a multistage, stochastic evolutionary process. To measure the divergent outcomes of tumors, we teamed up with the Winslow Lab to develop a new method that measures the growth of thousands of tumors within a single mouse using DNA barcodes, termed Tuba-seq. Tuba-seq measures tumor sizes far more precisely and rapidly than previous approaches, and demonstrates the importance of ...
