What is a System? A system is a group of organs that work together and provide an organism with an advantage for survival. It is the most complex organization in your body and the final level of the progression from cells to tissues to organs and then systems. Systems work alone and with other systems to allow your body to maintain homeostasis.

Biology4Kids.com: Animal Systems

The reproductive system enables the production of offspring through sexual reproduction between a male and female. The system is comprised of male and female reproductive organs and structures which produce sex cells and ensure the growth and development of offspring. The major male structures include the testes, scrotum, penis, vas deferens, and prostate.

renal system | Definition, Function, Diagram, & Facts ...

Ducts. Ducts are relatively simple tubular structures which are (usually) easily distinguished from blood vessels by their conspicuous cuboidal to columnar epithelial lining. Blood vessels, of course, are lined by simple squamous endothelium. The glandular cells which comprise ducts generally receive much less attention than those which actually secrete the gland's product.
