Most curricular materials in TeachEngineering are hierarchically organized; i.e., most hands-on activities are part of lessons, lessons are grouped into multiday curricular units and these again are bundled into subject areas. Some activities or lessons, however, were developed to stand alone, and hence, they might not conform to this strict hierarchy.

Allergies, also known as allergic diseases, are a number of conditions caused by hypersensitivity of the immune system to typically harmless substances in the environment. These diseases include hay fever, food allergies, atopic dermatitis, allergic asthma, and anaphylaxis. Symptoms may include red eyes, an itchy rash, sneezing, a runny nose, shortness of breath, or swelling.

Tubular proteinuria. Tubular proteinuria is a result of tubulointerstitial disease affecting the proximal renal tubules and interstitium. This results in decreased proximal reabsorption of proteins—in particular, low molecular weight proteins (generally below 25,000 Daltons) such as beta-2 microglobulin.

Genome editing, or genome engineering, is a type of genetic engineering in which DNA is inserted, deleted, modified or replaced in the genome of a living organism. Unlike early genetic engineering techniques that randomly inserts genetic material into a host genome, genome editing targets the insertions to site specific locations.. In 2018, the common methods for such editing use engineered ...

Finally, a rather potent mineral “blocking” effect has been reported in studies conducted on mint tea. Most, but not all, of the trials have found that peppermint and spearmint teas inhibit the absorption of dietary minerals such as iron. (13,14,15) This could actually be either a good thing or an unwanted consequence. For those who need extra iron, it’s obviously a harmful interaction.
