Keynesian economics (/ ' k eɪ n z i ə n / KAYN-zee-ən; sometimes called Keynesianism) are a group of various macroeconomic theories about how in the short run – and especially during recessions – economic output is strongly influenced by aggregate demand (total demand in the economy). In the Keynesian view, named for British economist John Maynard Keynes, aggregate demand does not ...

The Ramsey–Cass–Koopmans model, or Ramsey growth model, is a neoclassical model of economic growth based primarily on the work of Frank P. Ramsey, with significant extensions by David Cass and Tjalling Koopmans. The Ramsey–Cass–Koopmans model differs from the Solow–Swan model in that the choice of consumption is explicitly microfounded at a point in time and so endogenizes the ...

En économie, un modèle est une représentation simplifiée de la réalité économique ou d'une partie de celle-ci : par exemple la croissance, le commerce international, la monnaie, une entreprise ou un ménage. Comme dans les disciplines scientifiques les modèles économiques utilisent le formalisme mathématique qui permet de représenter le modèle sous forme d'équations ou plus ...

The central point of my Jacobin piece on the state of economics was meant to be: Whatever you think about mainstream macroeconomic theory, there is a lot of mainstream empirical and policy work that people on the left can learn from and engage with — much more than there was a decade ago. 1 . Some of the most interesting of that new work is from, and about, central banks.

1. Introduction. In cross-sectional and panel data modeling, the presence of omitted variable bias due to the omission of a spatial lag of the dependent variable, which captures what is referred to as spatial autoregressive (SAR) dependence in the cross-sections, has long been recognized.

A spatial autoregressive stochastic frontier model for ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

6. This brings us to the evolution of one of the two main state variables in our framework, political institutions (the other state variable is the distribution of resources, including distribution of physical and human capital stocks, etc.). Political institutions and the distribution of resources are the state variables in this dynamic system because they typically change relatively slowly ...

Chapter 6 Institutions as a Fundamental Cause of Long-Run ...

Ultimately, long-run economic growth is the most important aspect of how the economy performs. Material standards of living and levels of economic productivity in the United States today are about four times what they are today, in say, Mexico because of favorable initial conditions and successful growth-promoting economic policies over the past two centuries.

Economic Growth - From Poverty to Prosperity

EXECUTIVE SUMMARY. In the first part of this report, we provide our responses to points i) and ii) on the ToR. We describe the results of an international benchmarking exercise, in which we document how Indian households allocate assets and take on liabilities both along the lifecycle and across the wealth distribution, and compare these patterns to those evident in micro-data on households in ...
