Calculus (from Latin calculus, literally 'small pebble', used for counting and calculations, as on an abacus) is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.. It has two major branches, differential calculus (concerning instantaneous rates of change and slopes of

What's New at MMM Free Response Question Database (4/20/19). For those teachers who frequent the AP Central website (<https://apcentral.collegeboard.org>), we have put together a database of free-response questions since the year 1998. It classifies the calculus topics of every question (AB and BC) so that teachers can find free-response problems that cover specific techniques.

Zeno's paradoxes are a set of four paradoxes dealing with counterintuitive aspects of continuous space and time. 1. Dichotomy paradox: Before an object can travel a given distance d , it must travel a distance $d/2$. In order to travel $d/2$, it must travel $d/4$, etc. Since this sequence goes on forever, it therefore appears that the distance d cannot be traveled.

Zeno's Paradoxes -- from Wolfram MathWorld

In calculus, the indefinite integral of a given function (i.e., the set of all antiderivatives of the function) on a connected domain is only defined up to an additive constant, the constant of integration. This constant expresses an ambiguity inherent in the construction of antiderivatives. If a function $f(x)$ is defined on an interval I and $F(x)$ is an antiderivative of $f(x)$, then the set of all ...

Constant of integration - Wikipedia

An equivalence relation on a set X is a subset of $X \times X$, i.e., a collection R of ordered pairs of elements of X , satisfying certain properties. Write " xRy " to mean (x,y) is an element of R , and we say " x is related to y ," then the properties are 1. Reflexive: aRa for all a in X , 2. Symmetric: aRb implies bRa for all a,b in X 3. Transitive: aRb and bRc imply aRc for all a,b,c in X , where these ...
