Regulated linear power supply . Switching power supplies: this last family of power supplies is the most recent, from a technological point of view; it is based on a high frequency work system and it is capable of regulating the output voltage at a value that is lower (step-down) than the input one (as in the case of the kind seen before), or at a higher value (step-up).

Introduction The Mazilli ZVS flyback driver is well-known throughout the high voltage community for its simplicity and ability to deliver 20-50 kV at high currents for a flyback transformer. I build this circuit almost a year ago on a vero board, but it kept blowing the thin traces due to high currents flowing. ...

Radar is a detection system that uses radio waves to determine the range, angle, or velocity of objects. It can be used to detect aircraft, ships, spacecraft, guided missiles, motor vehicles, weather formations, and terrain. A radar system consists of a transmitter producing electromagnetic waves in the radio or microwaves domain, a transmitting antenna, a receiving antenna (often the same ...

**Radar - Wikipedia**

A transistor is a semiconductor device used to amplify or switch electronic signals and electrical power. It is composed of semiconductor material usually with at least three terminals for connection to an external circuit. A voltage or current applied to one pair of the transistor's terminals controls the current through another pair of terminals. Because the controlled (output) power can be ...

Although a software developer by day and tech hobbyist by night, I've never been into buying every new gadget that comes out. I got my first smartphone in 2015, and have so far resisted getting onto the tablet bandwagon, perhaps because I'm often at or near a computer anyway, rendering a tablet redundant.
