Software Engineering: A Practitioner's Approach

Software design is the process by which an agent creates a specification of a software artifact, intended to accomplish goals, using a set of primitive components and subject to constraints. Software design may refer to either "all the activity involved in conceptualizing, framing, implementing, commissioning, and ultimately modifying complex systems" or "the activity following requirements ...

Software design - Wikipedia

A software requirements specification (SRS) is a description of a software system to be developed. It is modeled after business requirements specification (), also known as a stakeholder requirements specification (StRS). [citation needed] The software requirements specification lays out functional and non-functional requirements, and it may include a set of use cases that describe user ...
