1. Component 1: The dice for the rock cycle activity should be constructed prior to the activity. Visual markers for each station (soil, cloud, volcano, etc) should also be made and set up before the activity (these can be student or teacher made) Also, put the name of each station on a sheet of paper (slip) for student groups to pick out of a hat.

I'm going to assume that you are asking about these terms in their relationship to science, so here is what I know: Porosity is the amount of empty space in a rock or other earth material (like ...

Relationship Between Porosity And Permeability | eNotes

One of the hallmarks of autumn, besides leaves falling and children returning to school, is frost. Frost is the fine layer of water crystals that forms from water vapor in the air. In August, you might have felt the wet dew covering the grass in the morning. Dew forms when water vapor in the air condenses onto cool surfaces.

How Does Frost Form? | Science project | Education.com
