Oyster Biology & Ecology. Scientific Name: *Crassostrea virginica* Common Names: Eastern oyster, American oyster Classification: Kingdom Animalia Phylum Mollusca Class Pelecypoda or Bivalvia Order Lamellibranchia Family Filibranchia Genus *Crassostrea* species *virginica*. Range and Habitat. The American or eastern oyster is found along the Atlantic and Gulf of Mexico coasts of North America.

Oyster Biology & Ecology

Conservation is a crisis discipline, one demanded by the unusual rates of loss; it is also a mission-driven one. By analogy, ecology and conservation have the same relationship as physiology and medicine. Human physiology studies the workings of the human body, whereas medicine is mission-oriented and aims to understand what goes wrong and how to treat it.

Marine biology is the scientific study of marine life, organisms in the sea. Given that in biology many phyla, families and genera have some species that live in the sea and others that live on land, marine biology classifies species based on the environment rather than on taxonomy.. A large proportion of all life on Earth lives in the ocean. The exact size of this large proportion is unknown ...

Marine biology - Wikipedia

A biome / ˈ b aɪ oʊ m / is a community of plants and animals that have common characteristics for the environment they exist in. They can be found over a range of continents. Biomes are distinct biological communities that have formed in response to a shared physical climate. Biome is a broader term than habitat; any biome can comprise a variety of habitats. ...

Environmental Ethics. The field of environmental ethics concerns human beings' ethical relationship with the natural environment. While numerous philosophers have written on this topic throughout history, environmental ethics only developed into a specific philosophical discipline in the 1970s. This emergence was no doubt due to the increasing awareness in the 1960s of the effects that ...

On a recent fossil collecting trip a friend asked, "What do you think is the most important organism on the Earth?" She knew full well I would answer, "Humans!" since we are the masters of our domain and without rival in the animal world (are we good or what?).

The Most Important Organism? | Ecology Global Network

The 19th-century English naturalist Charles Darwin argued that organisms come about by evolution, and he provided a scientific explanation, essentially correct but incomplete, of how evolution occurs

and why it is that organisms have features—such as wings, eyes, and kidneys—clearly structured to serve specific functions. Natural selection was the fundamental concept in his explanation.
