Animal Adaptations - Adaptations are the special features that help an animal live and survive in certain places or habitats. There are three kinds of animal adaptations: Behavioral, Physical, and Life Cycle. A behavioral adaptation is something an organism does, a behavior it performs to help it survive. A common animal adaptation is **migration**, when animals travel to a different place ...

Plant Adaptations. The spines on some desert plants also help with their survival by keeping away animals who want to eat them. The spines also act like leaves holding in the water during the hot weather. Cactus plants need to store a lot of water. Some desert plants have leaves with hair to shade them from the sun.

Camouflage is one way animals adapt to survive. For some animals, this means that their fur, scales, or skin are a similar color to the land around them. Deer, for example, have brown fur that blends in with the trees, so it's harder for predators to see them. This saves them from becoming prey to a larger animal.
