This section presents an abbreviated history of industrial MPC technology. Fig. 1 shows an evolutionary tree for the most significant industrial MPC algorithms, illustrating their connections in a concise way. Control algorithms are emphasized here because relatively little information is available on the development of industrial identification technology.

1. Introduction. Chemical engineering has been expanding its focus from process-centered products such as commodity chemicals like ethanol and acetic acid to product centered products such as mosquito repellent sprays and blended fuels (Zhang et al., 2017a). Modern society requires many chemical-based products for its survival, such as fuels, plastics, detergents, medicines and food (Zhang et ...

Methodology Optimization problems. In a genetic algorithm, a population of candidate solutions (called individuals, creatures, or phenotypes) to an optimization problem is evolved toward better solutions. Each candidate solution has a set of properties (its chromosomes or genotype) which can be mutated and altered; traditionally, solutions are represented in binary as strings of 0s and 1s, but ...

The term systems engineering can be traced back to Bell Telephone Laboratories in the 1940s. The need to identify and manipulate the properties of a system as a whole, which in complex engineering projects may greatly differ from the sum of the parts' properties, motivated various industries, especially those developing systems for the U.S. Military, to apply the discipline.
