In calculus, the indefinite integral of a given function (i.e., the set of all antiderivatives of the function) on a connected domain is only defined up to an additive constant, the constant of integration. This constant expresses an ambiguity inherent in the construction of antiderivatives. If

a function  $f(x)$  is defined on an interval  $I$  and  $F(x)$  is an antiderivative of  $f(x)$ , then the set of all ...

### Constant of integration - Wikipedia

In a different usage to the above definition, a polynomial of degree 1 is said to be linear, because the graph of a function of that form is a line.. Over the reals, a linear equation is one of the forms:  $y = mx + b$  where  $m$  is often called the slope or gradient;  $b$  the y-intercept, which gives the point of intersection between the graph of the function and the y-axis.

### Linearity - Wikipedia
