Answers: See table above. The electric force (F_{elect}) is computed using Coulomb's law: $F_{\text{elect}} = k \cdot Q_1 \cdot Q_2 / d^2$. where Q_1 and Q_2 represent the charges on the two objects, d represents the separation distance between the object's centers and $k = 9 \times 10^9 \text{ N/m}^2 / \text{C}^2$. This equation can be rearranged to solve for any quantity in the equation. The substitutions and algebra are shown below.

Static Electricity Review - Answers #3

Static electricity is due to electric charge that builds up on the surface of an insulator, such as a plastic comb. The charge that has built up cannot easily flow away from the insulator, which is why it is called static electricity. What causes static electricity?

Static Electricity

AP* Physics 1: Electrostatics ... Static electricity is an electrical charge that builds up due to friction between two dissimilar materials. Friction removes some electrons from one object and deposits them on the other. Each object is said to be charged.
