21. Ecological succession - a series of predictable changes that occur in a community over time. 22. Pioneer species are important in ecological succession because they are the first species to populate the area (example: lichens and moss growing on bare rock) and create soil for other plants to grow in. 23.

### **ANSWER KEY - Ecology Review Packet**

Section Editor rating: 8 / 10. Dezene Huber -- Considering the concern (and often reality) of global pollinator declines, it is interesting that the quality of nectar offering by wild and cultivated plants across a geographical range has not been much considered. This paper, as the authors point out, is a good first step in this direction and may help to set the trajectory for further studies.
