Principles of LINEAR SYSTEMS and SIGNALS

The superposition principle applies to any linear system, including algebraic equations, linear differential equations, and systems of equations of those forms. The stimuli and responses could be numbers, functions, vectors, vector fields, time-varying signals, or any other object that satisfies certain axioms.

For a given system of linear equations, there are only three possibilities for the solution set of the system: No solution (inconsistent), a unique solution, or infinitely many solutions. The possibilities for the solution set of a homogeneous system is either a unique solution or infinitely many solutions.
