Conservation is a crisis discipline, one demanded by the unusual rates of loss; it is also a mission-driven one. By analogy, ecology and conservation have the same relationship as physiology and medicine. Human physiology studies the workings of the human body, whereas medicine is mission-oriented and aims to understand what goes wrong and how to treat it.

Environmental Ethics. The field of environmental ethics concerns human beings' ethical relationship with the natural environment. While numerous philosophers have written on this topic throughout history, environmental ethics only developed into a specific philosophical discipline in the 1970s. This emergence was no doubt due to the increasing awareness in the 1960s of the effects that ...

Human-Induced Succession. Human activities can have a powerful effect on ecosystems and the way they change. This is known as human-induced succession, which can lead to changes that are often unexpected and sometimes seriously detrimental to the benefits that people derive from ecosystems. Pollution of the lagoons that surround small South Pacific islands provides a striking example.

Black people is a skin color-based classification, which is used for specific people with a mid to dark brown complexion. Not all "Black people" are dark skinned. However, in certain countries, often in socially based systems of racial classification or of ethnicity, it is used to describe persons who are perceived to be dark-skinned when compared to other populations.

Conservation - Calculating background extinction rates: To discern the effect of modern human activity on the loss of species requires determining how fast species disappeared in the absence of that activity. Studies of marine fossils show that species last about 1-10 million years. Assume that all these extinctions happened independently and gradually—i.e., the "normal" way—rather ...

The glossary that follows assumes a definition of ecology--the study of interactions between organisms and their environment--much wider than what fits under the field's habitual statistical persona. Ecofeminism and ecopsychology are mentioned, for example, as are terms from organic gardening and permaculture.
