Adjust the hills on a toy-car roller coaster and watch what happens as the car careens toward an egg (that can be broken) at the end of the track. The heights of three hills can be manipulated, along with the mass of the car and the friction of the track. A graph of various variables of motion can be viewed as the car travels, including position, speed, acceleration, potential energy, kinetic ...

Roller coasters can be a lot of fun. However, understanding how they work is really scientific. When it comes to describing how roller coasters work, it's all about physics. The most basic of roller coasters work by climbing up a large hill. Then they go down the hill. Since roller coaster cars don't have motors, they must use a special lift to ...
