Scientific control studies in medicine that attempt to determine whether something is a significant causal factor in producing a specific effect often use placebos as a control. In most of these studies, the placebo is defined as an inert substance, and it is pitted against an active substance to see if there is any significant difference in outcome in different groups.

Metaphysics is the branch of philosophy that examines the fundamental nature of reality, including the relationship between mind and matter, between substance and attribute, and between potentiality and actuality. The word "metaphysics" comes from two Greek words that, together, literally mean "after or behind or among [the study of] the natural".

Optics is the branch of physics that studies the behaviour and properties of light, including its interactions with matter and the construction of instruments that use or detect it. Optics usually describes the behaviour of visible, ultraviolet, and infrared light. Because light is an electromagnetic wave, other forms of electromagnetic radiation such as X-rays, microwaves, and radio waves ...
