Flatworms, roundworms, and segmented worms are all invertebrates. Some species of each type of worm are free-living, meaning they are not dependent on another organism. Some are parasitic. Flatworms belong to phylum Platyhelminthes. They do not have a coelom, respiratory system or a circulatory system. Tapeworms flukes are examples of flatworms.

There are so many worms living inside the earth that it's impossible to list them all here. That said, there are some worm groups that are larger than others such as the earthworm and the inch worm.

### **Types of Worms - All About Worms**

The largest organisms now found on Earth can be determined according to various aspects of an organism's size, such as: mass, volume, area, length, height, or even genome size. Some organisms group together to form a superorganism (such as ants or bees), but such are not classed as single large organisms. The Great Barrier Reef is the world's largest structure composed of living entities ...

We recently received several photos of a fairly long, skinny worm that a reader found in his backyard. We have received many questions about long, skinny worms, and every time we do our first thought is that the reader has found a horsehair worm (sometimes incorrectly written "horse hair worms"), as horsehair worms are indeed long and skinny.
