A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as Wi-Fi. Network computer devices that originate, route and terminate the data are called ...

Any http message (whether it is a request or response) needs to know how to reach its destination. In order to reach its destination, each http message carries an address called the destination TCP address. And each TCP address is composed of an IP address and a port number. I know all these acronyms (TCP, IP, etc..) might be overwhelming if your networking concepts are not strong.
