Flatworms, roundworms, and segmented worms are all invertebrates. Some species of each type of worm are free-living, meaning they are not dependent on another organism. Some are parasitic. Flatworms belong to phylum Platyhelminthes. They do not have a coelom, respiratory system or a circulatory system. Tapeworms flukes are examples of flatworms.

For the uninitiated, the expression “to open a can of worms” means to attempt to solve one problem, or to do something, that creates a whole litany of other problems that were not there in the first place. The idiom has become a journalistic and writing cliché over the years. For example, this ...

### **The Origin of the Expression "Open a Can of Worms"**

The term “worm” is commonly used to describe a wide range of invertebrates that are, in many cases, not closely related to one another. Some live in the soil, some in the sea, and some are parasites; some are beneficial to man, some are pests, and some can cause serious disease; the only thing they all have in common is a long, thin, flexible body.
