The term contact resistance refers to the contribution to the total resistance of a system which can be attributed to the contacting interfaces of electrical leads and connections as opposed to the intrinsic resistance, which is an inherent property, independent of the measurement method. This effect is often described by the term Electrical Contact Resistance or ECR and may vary with time ...

Electrical injury is a physiological reaction caused by electric current passing through the (human) body. Electric shock occurs upon contact of a (human) body part with any source of electricity that causes a sufficient magnitude of current to pass through the victim's flesh, viscera or hair. Physical contact with energized wiring or devices is the most common cause of an electric shock.

Introduction and Faraday's Law Objective: In this experiment, Faraday's law of induction will be investigated. Theory: Faraday's law of induction states the induced emf or voltage in a coil is proportional to the rate of change of magnetic flux through a coil, this is shown below: $\mathcal{E} = -d\phi/dt \dots$
