SOIL PROFILE. The ground is modified and enriched by the plants growing on it. Making a section of soil (figure 4), you can observe different layers: a layer rich in organic matter, the humus (O); a layer rich in roots and living organisms (A); a layer less rich in life, but still used by roots (B) and an inert soil (C).

The Theory of Island Biogeography is a 1967 book by Robert MacArthur and Edward O. Wilson. It is widely regarded as a seminal piece in island biogeography and ecology. The Princeton University Press reprinted the book in 2001 as a part of the "Princeton Landmarks in Biology" series. The book popularized the theory that insular biota maintain a dynamic equilibrium between immigration and ...

Conservation - Calculating background extinction rates: To discern the effect of modern human activity on the loss of species requires determining how fast species disappeared in the absence of that activity. Studies of marine fossils show that species last about 1–10 million years. Assume that all these extinctions happened independently and gradually—i.e., the “normal” way—rather ...
