This identity extends to complex-valued exponents. It can be shown that every continuous, nonzero solution of the functional equation $(+)=()$ is an exponential function, $:\rightarrow, \mapsto$, with $>$ The fundamental multiplicative identity, along with the definition of the number e as e^1 , shows that $=\times \cdots \times \square$ for positive integers n and relates the exponential function to the elementary notion of ...

In electronics, negative resistance (NR) is a property of some electrical circuits and devices in which an increase in voltage across the device's terminals results in a decrease in electric current through it.. This is in contrast to an ordinary resistor in which an increase of applied voltage causes a proportional increase in current due to Ohm's law, resulting in a positive resistance.
