I have a problem in that I have a burning desire to master set theory and cannot find worksheets with solutions dealing with elementary set theory. This is a really big chink in my chain in that if I can master the basic notions of set theory then I am up and away when it comes to mastering the deeper notions, such as the Borel hierarchy.

Exercises of Discrete Mathematics Updated: February 4, 2011 Note for the students: the proposed solutions of some exercises are quite lengthy. This does not necessarily mean that the exercise is difficult: in fact, in most cases, a very detailed (hence lengthy) solution to an exercise ... many cases, a shorter solution (e.g. the same solution ...

Chapter 4 Set Theory \A set is a Many that allows itself to be thought of as a One." (Georg Cantor) In the previous chapters, we have often encountered "sets", for example, prime numbers form a set, domains in predicate logic form sets as well. Defining a set formally is a pretty delicate matter,

for now, we will be happy

Is the set of all finite sets of natural numbers countable or uncountable? (you should justify your answer) Homework 2: In exercises 2.4, 2.6 and 2.8 you must write the proofs in the following way: every time you make an assertion that a set exists (or that two sets are equal) you must state which axiom(s) of set theory you are using.
