The rate of radioactive decay doesn't depend on the chemical state of the isotope. The rate of decay of  $^{238}\text{U}$ , for example, is exactly the same in uranium metal and uranium hexafluoride, or any other compound of this element. The rate at which a radioactive isotope decays is called the activity of the isotope.

The goal is to realize that alpha decay will reduce the mass of isotope by 4 and atomic number by 2. After completing this I will have students volunteer to answer questions 4-6 on the board. Write an equation for the alpha decay of polonium, and then use the Gizmo to check your answer. What isotope remains after the alpha decay of polonium-212?

Radioactive Decay Series. The naturally occurring radioactive isotopes of the heaviest elements fall into chains of successive disintegrations, or decays, and all the species in one chain constitute a radioactive family, or radioactive decay series. Three of these series include most of the naturally radioactive elements of the periodic table.
