Hello Sir, I am new to wind power. Fortunately I have been able to design a wind-like generator that produces 27-29 continuous VDC. What I mean by continuous is that it does not fluctuate below 26v or above 29v.

A homopolar generator is a DC electrical generator comprising an electrically conductive disc or cylinder rotating in a plane perpendicular to a uniform static magnetic field. A potential difference is created between the center of the disc and the rim (or ends of the cylinder) with an electrical polarity that depends on the direction of rotation and the orientation of the field.
