Value Chain Analysis is a useful tool for working out how you can create the greatest possible value for your customers. In business, we're paid to take raw inputs, and to "add value" to them by turning them into something of worth to other people. This is easy to see in manufacturing, where the ...

Until the 19th century, linear algebra was introduced through systems of linear equations and matrices. In modern mathematics, the presentation through vector spaces is generally preferred, since it is more synthetic, more general (not limited to the finite-dimensional case), and conceptually simpler, although more abstract.. A vector space over a field  $F$  (often the field of the real numbers ...

One of my biggest pet peeves is how doctors use the word compliance. If a patient doesn't comply, it usually implies it was the patient's fault. In sleep medicine, compliance is often used to measure how well patients use their CPAP machines. But compliance is not the same thing as success. Various studies report [...]

Distress is a prevalent and costly problem in today's workplace. About one-third of workers report high levels of stress. 20–30% of workers in different sectors of the European Union reported in 2007 that they believed work-related stress was potentially affecting their health. Three-quarters of employees believe the worker has more on-the-job stress than a generation ago.

Creationists often argue that evolutionary processes cannot create new information, or that evolution has no practical benefits. This article disproves those claims by describing the explosive growth and widespread applications of genetic algorithms, a computing technique based on principles of biological evolution.
