Mitochondria are organelles that play pivotal roles in diverse cellular processes, such as metabolism, intracellular calcium balance, signaling, the assembly of iron-sulfur clusters that are important for oxidation-reduction reactions and apoptosis (Brookes et al., 2004). Cellular mitochondria do not function as isolated and static organelles; instead, they mix the contents,

In bacteria, two major pathways exist to secrete proteins across the cytoplasmic membrane. The general Secretion route, termed Sec-pathway, catalyzes the transmembrane translocation of proteins in their unfolded conformation, whereupon they fold into their native structure at the trans-side of the membrane. The Twin-arginine translocation pathway, termed Tat-pathway, catalyses the translocation ...
