Given a differentiable manifold  $M$ , a vector field on  $M$  is an assignment of a tangent vector to each point in  $M$ . More precisely, a vector field  $F$  is a mapping from  $M$  into the tangent bundle  $TM$  so that  $\pi \circ F$  is the identity mapping where  $\pi$  denotes the projection from  $TM$  to  $M$ . In other words, a vector field is a section of the tangent bundle.. An alternative definition: A smooth vector field  $X$  on a ...

In geometry, curvilinear coordinates are a coordinate system for Euclidean space in which the coordinate lines may be curved. Commonly used curvilinear coordinate systems include: rectangular, spherical, and cylindrical coordinate systems. These coordinates may be derived from a set of Cartesian coordinates by using a transformation that is locally invertible (a one-to-one map) at each point.
