Solutions to Linear Algebra and Its Applications ...

Linear algebra moves steadily to n vectors in m -dimensional space. We still want combinations of the columns (in the column space). We still get m equations to produce b (one for each row). Those equations may or may not have a solution. They always have a least-squares solution. The interplay of columns and rows is the heart of linear algebra.

70 Solutionsto Exercises Problem Set 4.1, page 202 1 Both nullspace vectors will be orthogonal to the row space vector in R^3 . The column space of A and the nullspace of A^T are perpendicular lines in R^2 because rank = 1. 2 The nullspace of a 3 by 2 matrix with rank 2 is $\{0\}$ (only the zero vector because the 2 columns are independent). So $x^T x = 0$, and row space = R^2 .
