Newly corrected, this highly acclaimed text is suitable for advanced physics courses. The authors present a very accessible macroscopic view of classical electromagnetics that emphasizes integrating electromagnetic theory with physical optics. The survey follows the historical development of physics, culminating in the use of four-vector relativity to fully integrate electricity with magnetism.

Fluid mechanics is the study of the flow of fluids, and is sometimes known as hydrodynamics. Properties normally ascribed to fluids include density  $\rho$ , compressibility  $\beta$  (sometimes specified in terms of the so-called second viscosity coefficient  $\lambda$ ), and dynamic viscosity  $\eta$ . In general, the motion of fluids is extremely complicated, including highly nonlinear phenomena like ...

In chemistry, resonance is a way of describing bonding in certain molecules or ions by the combination of several contributing structures (or forms, also variously known as resonance structures or canonical structures) into a resonance hybrid (or hybrid structure) in valence bond theory. It has particular value for describing delocalized electrons within certain molecules or polyatomic ions ...

Because the product of any two basis vectors is plus or minus another basis vector, the set  $\{\pm 1, \pm i, \pm j, \pm k\}$  forms a group under multiplication. This non-Abelian Group is called the quaternion group and is denoted  $Q_8$ . The real group ring of  $Q_8$  is a ring  $R[Q_8]$  which is also an eight-dimensional vector space over  $R$ . It has one basis vector for each element of  $Q_8$ .
