Instant-runoff voting (IRV) or Ranked choice voting (RCV) is a type of ranked preferential voting method used in single-seat elections with more than two candidates. Instead of indicating support for only one candidate, voters in IRV elections can rank the candidates in order of preference.

Instant-runoff voting - Wikipedia

Easy: you wrap a `<form>` around the element, call `reset` on the form, then remove the form using `.unwrap()`. Unlike the `.clone()` solutions otherwise in this thread, you end up with the same element at the end (including custom properties that were set on it).. Tested and working in Opera, Firefox, Safari, Chrome and IE6+. Also works on other types of form elements, with the exception of `type="hidden"`.

A Markov chain is a stochastic model describing a sequence of possible events in which the probability of each event depends only on the state attained in the previous event.. In probability theory and related fields, a Markov process, named after the Russian mathematician Andrey Markov, is a stochastic process that satisfies the Markov property (sometimes characterized as "memorylessness").

EasyPost Objects. The EasyPost API consists of many object types. There are several attributes that are consistent across all objects: id: Every EasyPost Object that can be created through the API has an id field that is used to refer to the object in other API calls. An id consists of a prefix based on the object type (e.g. Shipments have the prefix "shp_") followed by 32 hex characters.
