Methane Digesters (Large) Project Drawdown defines methane digesters (large) as: large methane digesters associated with agriculture, manure, and wastewater facilities that produce biogas to be used for electricity generation in dedicated biogas or combined heat and power plants. This solution replaces conventional electricity-generating technologies such as coal, oil, and natural gas power plants.

Methane Digesters (Large) | Drawdown

1. Introduction. To date, power has mainly been generated by large centralized power plants run by non-renewable fossil fuels. This directly causes environmental degeneration and energy losses in power transmission due to long physical distances between generation and consumption sites. The increasing integration of renewable energy sources (RES) into the energy system provides a solution to ...

Designing microgrid energy markets: A case study: The ...

Methane Digesters (Small) Project Drawdown defines methane digesters (small) as: technologies that produce biogas for household heating through the anaerobic digestion of organic waste. This solution replaces fuelwood, charcoal, or even fossil fuel-based cookstoves, and helps mitigate their emissions.

Generative art refers to art that in whole or in part has been created with the use of an autonomous system. An autonomous system in this context is generally one that is non-human and can independently determine features of an artwork that would otherwise require decisions made directly by the artist.

In economics, an externality is the cost or benefit that affects a party who did not choose to incur that cost or benefit. Externalities often occur when a product or service's price equilibrium cannot reflect the true costs and benefits of that product or service. This causes the externality competitive equilibrium to not be a Pareto optimality. ...
