Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

2. The Expansion of cell phone usage as a multidimensional challenge for sociological theory and research. Since its inception in the late 19th century until recent years, the telephone has received very meagre attention from sociology and the media sciences (Lasen 2002a: 31). In particular, no considerable efforts have been made to gain a synopsis of its multifaceted impacts on various fields ...

A Brief History of Logical Levels by Robert B. Dilts. The notion of logical levels refers to the fact that some processes and phenomena are created by the relationships between other processes and phenomena. Any system of activity is a subsystem embedded inside of another system, which is embedded inside of another system, and so on.
