1.4 Conditions of Equilibrium. A structure is a unit consisting of interconnected members supported in such a way that it is capable of carrying loads in static equilibrium. Structures are of four general types: frames, trusses, machines, and thin-walled (plate and shell) structures. Frames and machines are structures containing multiforce members. The former support loads and are usually ...

In this study, FEA is used to analyze the mechanics between the vacuum chuck and wafer during the back-thinning process. Compressive stress is usually formed in the surface damage layer of a wafer after the thinning process , , , . In the FEA process, thermal stress is assumed to simulate both grinding-induced stress (also called machining stress in this paper) and residual stress since these ...
