Photosynthesis is a process used by plants and other organisms to convert light energy into chemical energy that can later be released to fuel the organisms' activities. This chemical energy is stored in carbohydrate molecules, such as sugars, which are synthesized from carbon dioxide and water - hence the name photosynthesis, from the Greek φῶς, phōs, "light", and σύνθεσις ...

1. Solving for a single variable in a first degree equation. In an equation such as  $a = b / c$  being able to solve for a, b, or c correctly is extremely important. The most common mistake in this situation is thinking that the solution in the case of solving for c is not recognizing that  $c = b / a$ . Way too often students think that the value for c is equal to  $a / b$ .

The use of metric prefixes dates back to the inception of the French metric system, in 1793. It was originally decided that the submultiples of all basic units would be prefixed with a Latin root, corresponding to the decimal divisor (deci for 10, centi for 100, milli for 1000), whereas the decimal multiples would be prefixed with a Greek root, corresponding to the decimal multiplier (deca for ...
