A light-emitting diode (LED) is a semiconductor light source that emits light when current flows through it. Electrons in the semiconductor recombine with electron holes, releasing energy in the form of photons. This effect is called electroluminescence. The color of the light (corresponding to the energy of the photons) is determined by the energy required for electrons to cross the band gap ...

Headlamps get better each year, and that means yesterday's low-end lights may offer enough firepower now to meet your needs. A standout candidate is the Petzl Tikkina, our Best Buy award winner, which offers more than enough lighting power for most people's needs, is super easy, and is typically sold at a compelling street price around \$16. In prior years the Tikkina just didn't have the ...
