**Cell Reproduction Reinforcement And Study Guide**

Reinforcement is a process of speciation where natural selection increases the reproductive isolation between two populations of species. This occurs as a result of selection acting against the production of hybrid individuals of low fitness. The idea was originally developed by Alfred Russel Wallace and is sometimes referred to as the Wallace effect. The modern concept of reinforcement ...

Sexual reproduction uses two pairs of chromosomes to make one organism and these DNA strands can mutate. Don't get me wrong, mutation can also occur in asexual organisms which is why hand sanitizers and its similars can only kill "99.9%" of the germs because the other ".01" mutates and

becomes immune to it.
