Deep hypothermic circulatory arrest (DHCA) is a surgical technique that involves cooling the body to temperatures between 20°C (68°F) to 25 °C (77 °F), and stopping blood circulation and brain function for up to one hour. It is used when blood circulation to the brain must be stopped because of delicate surgery within the brain, or because of surgery on large blood vessels that lead to or ...

Catalase. Hydrogen peroxide ( $H_2O_2$ ) is a common by-product of metabolic reactions. In high concentration it is toxic; therefore, its accumulation in cells would be harmful. Most tissues, however, contain the enzyme catalase, which catalyzes the breakdown of peroxide to water and oxygen as follows:
