Solution concentration can be described quantitatively in several ways. Two of them are molarity and molality. Molarity is the ratio of moles of solute to liters of solution. Molality is the ratio of moles of solute to kilograms of solvent. This quiz will cover molarity and molality problems. You ...

How do strong and weak acids differ? Use lab tools on your computer to find out! Dip the paper or the probe into solution to measure the pH, or put in the electrodes to measure the conductivity. Then see how concentration and strength affect pH. Can a weak acid solution have the same pH as a strong acid solution?

You can tell suspensions from colloids and solutions because the components of suspensions will eventually separate. Colloids can be distinguished from solutions using the Tyndall effect. A beam of light passing through a true solution, such as air, is not visible.

Class practical or Demonstration. This activity compares the colours of three halogens in aqueous solution and in a non-polar solvent. These halogens also react to a small extent with water, forming acidic solutions with bleaching properties.. Halogens undergo redox reactions with metal halides in solution, displacing less reactive halogens from their compounds.
