Faraday's and Lenz's Law. Faraday's experiments showed that the emf induced by a change in magnetic flux depends on only a few factors. First, emf is directly proportional to the change in flux. Second, emf is greatest when the change in time is smallest—that is, emf is inversely proportional to. Finally, if a coil has turns, an emf will be produced that is times greater than for a ...

### **Faraday's Law of Induction: Lenz's Law - College Physics**

This relationship is known as Faraday's law of induction. The units for emf are volts, as is usual. The minus sign in Faraday's law of induction is very important. The minus means that the emf creates a current  $I$  and magnetic field  $B$  that oppose the change in flux  $\Delta\Phi$ —this is known as Lenz's law.
