A space elevator is a proposed type of planet-to-space transportation system. The main component would be a cable (also called a tether) anchored to the surface and extending into space. The design would permit vehicles to travel along the cable from a planetary surface, such as the Earth's, directly into space or orbit, without the use of large rockets.

Here, the notation  $\hat{x}_{i|j}$  refers to the state estimate at time  $i$  given information up to and including time  $j$ . The Kalman filter gain  $K_f$  is computed from the solution of a matrix Riccati equation. The controller gain  $K_c$  can be found by constructing a dual Riccati equation, so that the same numerical techniques and software can be used for both calculations.
